A Global PLM Partnership

Trissential's Global Alliance Agreement with Siemens

Driven by a relationship spanning a decade and a half, Trissential's parent company Expleo recently inked a global agreement with Siemens to provide PLM and QA Services to Siemen's clients worldwide. Here in the U.S., Trissential's expert team of consultants will work with Siemens to help meet the demand for faster, more reliable software releases.

Trissential's work with Siemens began in 2005 when we began developing a unique Teamcenter Test Automation Framework (TAF). Today the TAF automates a significant portion of all the core tests performed by Siemens Global Testcenter.

The new agreement expands Trissential's role as a Siemens solution integrator and will include services such as:

- PLM Strategy and Risk Assessment
- Continuous Quality
- Data Migration and Version Management
- Test Automation, Customization and TAF Implementation

As part of Expleo, the world's leading software quality provider, Trissential understands the need for quality better than anyone. As part of the new Global Alliance Agreement, we continue to collaborate on the development and delivery of innovative solutions related to product lifecycle management.

> **Over the years the TAF has created a reusable framework for testing Siemens software that has simplified and accelerated their testing cycles. Obviously, this has resulted in faster system launches with far fewer errors, and has reduced test automation costs by as much as 40%.**

The Trissential Advantage

Our experience within the Siemens Teamcenter over the past 15 years makes us uniquely qualified to extend our PLM and Continuous Quality services to Siemens clients across the U.S. and worldwide. Trissential has created services based on the optimization of test cases, sophisticated test automation including smart reuse of test assets, and predictable project pricing. This unique perspective delivers the following benefits to Siemens clients:

- Advanced early error detection, identifying errors, ambiguities and requirement gaps well before they become a major problem

- Comprehensive test coverage via our Test Automation Framework, supported by our team of highly skilled CQ and PLM experts

- Reduced go-to-market cycles, with more timely upgrade releases

- Risk mitigation post-deployment based on proactive risk identification in earlier phases

As part of Expleo, the world's leading independent software quality provider, Trissential has unique end-to-end quality management and quality assurance solutions that dramatically improve your business results.

> **We have seen customers greatly streamline their testing processes with test automation thanks to these solutions and we are delighted to be able to extend this Alliance bringing those benefits to all our Teamcenter customers worldwide.**
